MUNEEB AHMAD BUTT

MERN STACK & FULL-STACK WEB DEVELOPER

SUMMARY

Final-year Computer Science student and MERN stack developer who has shipped a complete, multi-role platform end to end — React on the front end, Node.js/Express/MongoDB on the back end, with real-time features and payment integration. Comfortable across the stack: REST API design, database modelling, authentication and authorization, and building responsive interfaces that hold up under real use. Currently building a second full-stack product from scratch.

PROJECTS

MedZone — Online Pharmacy & Delivery Platform

FINAL YEAR PROJECT

Full-stack MERN platform · 6 user roles · React · Node.js · Express · MongoDB · Socket.IO

- Built a **six-role platform** — customer, pharmacist, cashier, CEO, rider and admin — covering online ordering, an in-store point-of-sale system, multi-branch pharmacy management, and end-to-end rider delivery logistics.
- Implemented the full order lifecycle in Node.js/Express/MongoDB: **atomic stock reservation** to prevent overselling, Stripe checkout with signed-webhook payment confirmation, and a rule-based order-status state machine.
- Built real-time features with Socket.IO — live order updates, role-scoped chat, and a **live rider-tracking map** (Leaflet + OSRM road routing) with progress and ETA calculation.
- Designed a secure delivery-handover system using time-limited, rate-limited **OTP codes with timing-safe verification**, so an order can only be marked delivered once the handover is proven.
- Implemented JWT authentication with httpOnly cookies, role- and ownership-based authorization middleware, and an **append-only ledger** for auditable weekly rider and pharmacy settlements.

BookMyGround — Indoor Sports Ground Booking Platform

IN PROGRESS

Full-stack MERN application · Personal project

- Building an online booking platform for indoor sports grounds — futsal, cricket nets, badminton courts — with real-time slot availability, a booking calendar, and a dashboard for ground owners to list venues and manage reservations.
- Designing the slot-reservation flow around the same **atomic, race-condition-safe pattern** used for stock control in MedZone, so two customers can never book the same slot.
- Building the customer-facing search and booking UI in React, backed by a Node.js/Express API and MongoDB.

React Node.js Express MongoDB

Personal Developer Portfolio

WEB · DEPLOYED

- Designed and built a personal portfolio site with HTML5, CSS3 and JavaScript to present my skills and the MedZone project, deployed via GitHub Pages.
